WORK EXPERIENCE

Organizational Development Consultant

Madiba Dec 2025 – Present Freelance

Consulting • AI-Driven Transformation

- With founders and managers I diagnose where the business stands on AI: what is already in use, which processes could be optimized, and which solutions would return the most value. On that map, the goal is to identify frictions and bottlenecks. My methodology rests on two instruments of my own: El Espejo, which maps the business cross-functionally, and El Mapa, which sets where it is heading and prices each move in hours returned per month.
- On every automation I have two missions: building it, and creating the adoption strategy. A quotation flow went from 2 hours to 10 minutes (Google Forms → Make.com → Claude API → Docs → Gmail); a marketing agent turned a full day of manual work into about an hour; a Python engine assembled a sales pipeline from records a team already keeps; a ClickUp ecosystem replaced ad-hoc coordination.
- I convert tacit knowledge into operating systems: the criteria a founder applies by instinct and the decisions that never reached a procedure get worked into documented workflows (SOPs). Generally, that is the layer most AI adoptions skip, and why they stall. I designed and run my own WAT system: the workflows, the agents and the tools.

Change Management Consultant

Accenture 2025 – 2026 Buenos Aires

Consulting • SAP / WalkMe

- Co-led a nine-month WalkMe proof-of-concept deployment over SAP with a second PM, sharing the workload and the strategy — the client measured a 20% reduction in employee learning time.
- Ran the client-side discovery that scoped the PoC to five processes, identifying where friction actually sat inside SAP; the same client report recorded an 18% reduction in daily workload time for key business users.
- Built the rollout and adoption strategy on a three-gate validation chain (client PM → process SME → production), reaching 88% adoption among the first 100 users in the client's first post-launch measurement.

PROFILE

Most AI implementations stall because organizations focus on the tool rather than the team using it. As a Project Manager specializing in AI transformation, I bridge that gap by combining deep change management experience with custom technical architecture to deliver systems that drive real adoption.

I have spent the last eight years managing projects across consulting, tech and operations. My work is closing the distance between having a tool and using it properly: I map processes, build automations — almost always with AI now — and design the adoption strategy that gets the team to take it on.

Between 2020 and 2025 I lived in Australia, where I moved from construction work to leading teams in mining. That experience expanded my understanding of how teams made up of people from different cultures work together.

KEY ACHIEVEMENTS

✔ **20% performance lift**
Designed and ran evaluation frameworks for an external consultancy at MercadoLibre (4 teams, 50+ professionals), then restructured teams around the findings.

✔ **WalkMe rollout**
88% adoption among the first 100 users in a SAP environment, measured by the client.

✔ **2 hours → 10 minutes**
Automated quotation preparation, from the form to the sent document: Google Forms → Make → Claude API → Docs → Gmail.

✔ **–18% daily workload**
Process discovery across SAP workflows cut daily work time for key business users, measured by the client.

Hose Team Leader

SRG Skilled Resources 2024 – 2025 Australia

Industrial / Mining

- Led teams in high-risk, safety-critical mining environments across BHP and FMG operations.
- Delivered projects under strict operational and safety standards in remote, high-pressure settings.
- Strengthened leadership and execution capabilities in multicultural, performance-driven environments.

International Trade & Construction

Multiple sites 2020 – 2023 Australia

Construction • Carpentry & Metals

- Hands-on execution across construction and industrial trades at multiple Australian sites.

Senior Product Team Leader

MercadoLibre 2018 – 2020 Buenos Aires

Marketplace • IT Consulting

- Led a consulting project across 4 team leaders and multiple IT analyst teams, ensuring alignment across workstreams and driving delivery outcomes.
- Led a one-month performance audit of an external consultancy (4 team leaders, 50+ IT analysts), designing technical and soft-skills evaluation frameworks scored independently by both sides before comparison — performance improved 20% the following quarter.
- Reorganized team structures and resource allocation based on performance insights, improving delivery effectiveness and coordination across analysts and team leaders.

EDUCATION

Postgraduate Degree in Corporate Communication

UADE University

2019

Bachelor's Degree in Communication Science

UADE University

2017

LANGUAGES

Spanish

Native

English

C1 — Advanced

Portuguese

B2 — Upper intermediate

SKILLS

- Change Management
- AI-Driven Process Optimization
- Organizational Diagnosis
- Digital Adoption (WalkMe • SAP)
- Process Design & Automation
- Backlog Management
- Roadmap & Prioritization

TOOLS

Claude API • Claude Code • Anthropic SDK • Python • Make • VS Code • Notion • ClickUp
